

Comprehensive Analysis of Bus Fleet Dataset

5th March 2026

| **Advancing** Mobility, **Enriching** Experiences

Fleet Distribution by Bus Model, Region, and Operational Status

Total Number of Bus Model

Total Bus by Region

Active vs Inactive

Observations & Findings:

- 1. **Scania K250** recorded the highest fleet count with **440** units.
- 2. **Central** region has the highest fleet with **1674** units.
- 3. Out of the total fleet, **1,852 buses are active**, while **297 buses are inactive**, showing that the majority of the fleet remains operational.

Total Bus Age and Operational Status Overview

Total Bus Age by Status

Inactive Bus Model of 15-20 Years Bus

Observations & Findings:

- 1. **15–20 years age group** recorded the highest number of inactive buses (192 units), indicating higher fleet of decommission, maintenance, or replacement.
- 2. Among the **15–20 years inactive buses**, Volvo recorded the highest number (99 units), followed by Scania K270 (86 units).

Total and Average Bus Age (Proposed to Decomm) by Model

Observations & Key Insights:

Bus Active (558 units):

- **Scania K270 (15.6 yrs), KL Intercoach (15.0 yrs), Man Deftech (14.7 yrs), Scania K250 (13.1 yrs)** are aging buses, indicating several units may **require replacement** soon.
- **ADL E200 (10.5 years)** and **ADL E500 (10.4 years)** are also listed for proposed decommissioning, despite being relatively younger buses.

E-Bus Active (15 units):

- **BYD K9D (10.7 yrs)** is moderately aged and may require lifecycle planning in the future.

Total and Average Bus Age by Daily Bus Status (DBS)

Observations & Key Insights:

- The average age of **Spare** buses (**9.8 years**) is close to average age of **Operating** buses (**8.5 years**), indicating the **backup fleet** is **almost as old as the active fleet**, which may **reduce reliability** during breakdowns or service disruptions.
- Buses in **Major** maintenance average **13 years**, suggesting this is the age when buses start needing **heavy repairs**.
- The **Refurbishment** category shows only **0.9 years** average age, which may indicate **data issues** or an **unusual refurbishment process**.

Operating Bus by Bus Age

Observations & Key Insights:

- The fleet has a **high** number of buses aged **10–15 years**, suggesting many vehicles may reach **decommissioning age** within the next few years.
